

WHAT IS CLAIMED IS:

506 A4>

1. A data communication system comprising:
connection means connected to a data processing
terminal;
operation means for inputting a manual designation
caused by an operator;
transmission means for transmitting data on the
basis of the designation input by said operation means;
and
notification means for notifying information related
to data transmission performed by said transmission means
based on the designation input by said operation means to
the data processing terminal through said connection
means in accordance with a change in state of said data
communication system.

506 E2>

2. A data communication system according to claim
1, wherein said transmission means transmits data on the
basis of a second designation from the data processing
terminal connected through said connection means.

506 A5>

3. A data communication system according to claim
1, wherein the information notified by said notification
means includes at least one of a transmission

destination, a transmission time, and a number of transmission pages.

503 E41 >

4. A data communication system according to claim 1, wherein said notification means performs notification in accordance with a change in information to be notified.

5. A data communication system according to claim 1, wherein said notification means notifies information related to data transmission upon completion of the data transmission performed by said transmission means.

6. A data communication system according to claim 1, wherein said notification means notifies data transmitted by said transmission means.

503 A6 >

7. A data communication system comprising:
connection means connected to a data processing terminal;
operation means for inputting a manual designation caused by an operator;
designation means for designating an ID by an operation of said operation means;
transmission means for transmitting data on the

basis of the designation input by said operation means;
and

notification means for notifying information related to data transmission performed by said transmission means based on the designation input by said operation means to the data processing terminal through said connection means in accordance with the ID designation performed by said designation means.

8. A data communication system according to claim 7, wherein said notification means does not perform notification in an absence of an ID designated by said designation means.

9. A data communication system according to claim 7, wherein the ID designated by said designation means is information representing a user on a network.

10. A data communication system according to claim 7, wherein said transmission means transmits data on the basis of the designation from the data processing terminal connected through said connection means.

11. A data communication system according to claim 7, wherein information notified by said notification

SECRET 3046680

Sub File >

means includes at least one of a transmission destination, a transmission time, and a number of transmission pages.

12. A data communication system according to claim 7, wherein said notification means notifies data transmitted by said transmission means.

13. A method of controlling a data processing terminal, connected to a data communication system for performing data communication with a destination, for controlling the data communication system, comprising:
the reception step of receiving information related to data communication performed by a manual operation performed by the data communication system;
the designation step of designating data communication to the data communication system; and
the storage step of independently storing the information received in said reception step and information related to data communication based on the designation in said designation step.

14. A method according to claim 13, wherein information representing a user ID is received in said reception step, and information related to data

505A7
0899703-1229
06221-302680

communication is stored in an area corresponding to the user ID in said storage step.

5.6 K₁ >

15. A method according to claim 13, wherein data transmitted by the data communication system is received in said reception step.

5.6 A₈ >

16. A method according to claim 13, wherein the information received in said reception step includes at least one of a transmission destination, a transmission time, and a number of transmission pages.

17. A method of controlling a system having a data communication system for performing data communication with a destination and a data processing terminal for controlling the data communication system, comprising the steps of:

the data communication system:

designating an ID on the basis of a manual operation of the data communication system and performing data communication, and

notifying information related to the data communication to a data terminal, and

said data processing terminal:

designating data communication to the data

communication system,

receiving information notified by the data
communication system, and

independently storing information related to data
communication based on the designation and the
information received from the data communication system.

18. A computer readable program, stored in a
storage medium, for controlling a data communication
system connected to a data processing terminal, said
program comprising:

the input step of inputting a manual designation
caused by an operator;

the transmission step of transmitting data based on
a designation input in said input step; and

the notification step of notifying information
related to data communication performed in said
transmission step based on the designation input in said
input step to the data processing terminal in accordance
with a change in state of the data communication system.

19. A computer readable program, stored in a
storage medium, for controlling a data communication
system connected to a data processing terminal, said
program comprising:

459270 3046630

the input step of inputting a manual designation caused by an operator;

the designation step of designating an ID;

the transmission step of transmitting data on the basis of a designation input in said input step; and

the notification step of notifying information related to data communication performed in said transmission step based on the designation input in said input step to the data processing terminal in accordance with the ID in said designation step.

20. A computer readable program, stored in a storage medium, for controlling a data processing terminal, connected to a data communication system for performing data communication with a destination, for controlling the data communication system, said program comprising:

the reception step of receiving information related to data communication performed by a manual operation of the data communication system;

the designation step of designating data communication to the data communication system; and

the storage step of independently storing the information received in said reception step and information related to the data communication based on

20250226

the designation in said designation step.
